

Transforming Healthcare Reconciliation with AIUN

Powered by AIUN

Background

A prominent medical imaging organization in Australia, with operations across urban and regional locations, processes high volumes of check payments and remittance records monthly from public healthcare systems and private clients.

Despite having ERP and billing systems, reconciliation remained manual—leading to inefficiencies and frequent discrepancies. Strict compliance requirements demanded a secure and scalable automation solution.

Challenges

Strict data security and compliance requirements

High volume of checks and remittance documents

Manual cross-verification with billing systems

Reconciliation delays and ERP backlogs

Month-end operational strain

Limited audit traceability

No centralized dashboard for visibility

The AIUN Solution

The organization implemented AIUN's Bank Checks & Remittance Automation Platform—an AI-powered workflow solution that automates data extraction, validation and reconciliation while ensuring compliance and scalability.

Key Capabilities

AI-driven data extraction

Automatically captures and structures data from multiple sources with high accuracy.

Automated reconciliation engine

Matches and validates transactions instantly to eliminate manual effort.

Exception-based processing

Focuses only on anomalies, reducing workload and improving efficiency.

ERP and system integration

Seamlessly connects systems to ensure smooth and consistent data flow.

Audit-ready logging

Maintains detailed, traceable records for compliance and transparency.

Real-time dashboards

Provides instant insights for faster and smarter decision-making.

Implementation Highlights

- Security**
On-premise deployment for security
- Analysis**
Workflow mapping and process assessment
- Integration**
ERP and system integration
- Configuration**
AI model configuration
- Implementation**
Phased rollout within 12 weeks

Impact

Faster revenue realization

Accelerates cash flow by reducing delays in billing and collections.

Improved financial visibility

Provides clear, real-time insights into financial performance and health.

Reduced discrepancies

Minimizes errors through automated validation and accurate data matching.

Stronger compliance

Ensures adherence to regulations with standardized and auditable processes.

Scalable operations

Supports business growth with flexible systems that adapt to increasing demands.

Business Outcomes

Processing Time: **7–10 mins** → **<1.5 mins**

Manual Entry: **100%** → **<8%**

Errors: **Reduced by 65%**

Backlogs: **Eliminated**

Scalability: **Volume-based growth**

Conclusion

AIUN's platform transformed manual, error-prone reconciliation into a fast, automated and highly accurate process. The organization achieved stronger compliance, real-time visibility and significant operational efficiency gains.

With scalable automation in place, it is now equipped to handle growing transaction volumes with speed and confidence.

Contact AIUN

Ready to transform your healthcare organization's bank check reconciliation process? Contact our solutions team to learn how Aiun's Smart Bank Check Reconciliation can be tailored for NHS Medicare remittances—automating check data extraction, matching and validation with high accuracy. Propel your finance operations into a new era of speed, control and compliance. We are committed to helping healthcare providers streamline complex remittance workflows while maintaining the highest standards of data security and audit readiness.
